

# Hikvision Mobile NVR+ Swarco AVM Integration Solution

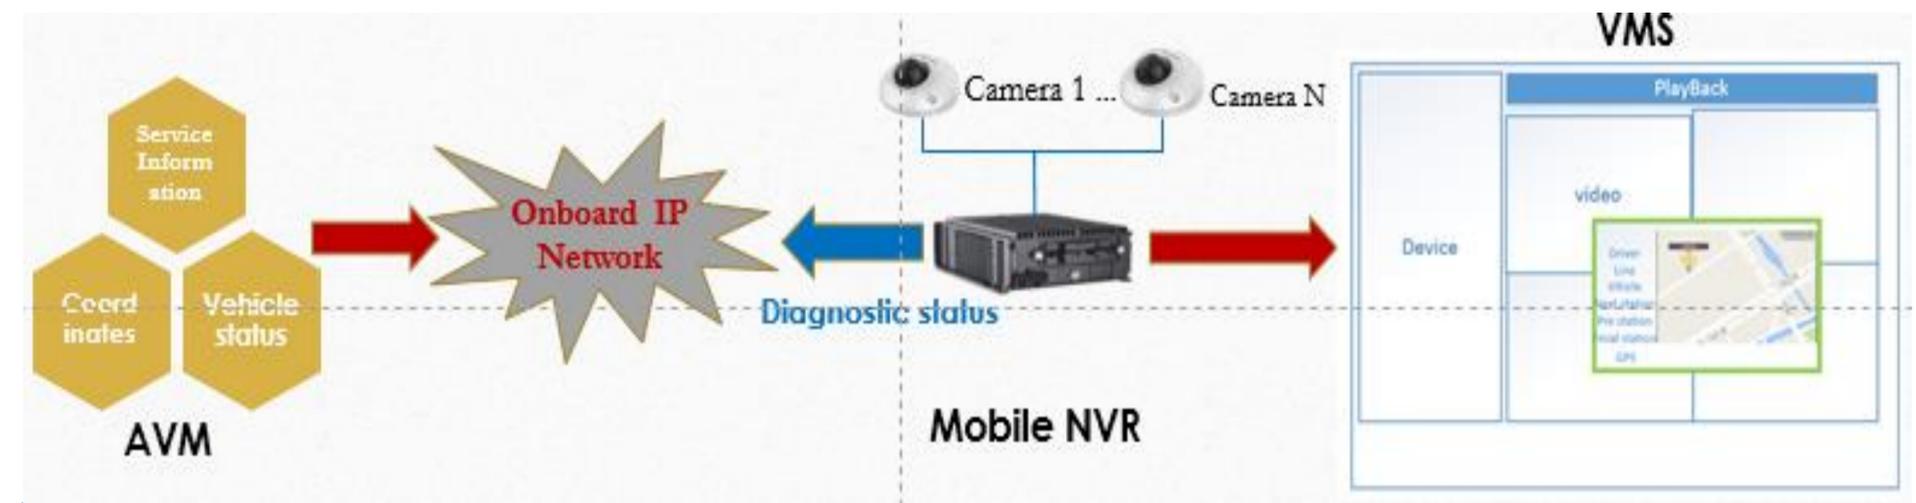

## Requirements

- Logic and diagnostic status:**  
The MVR publish information about **logic and diagnostic status** of the entire CCTV system (cameras, disk, etc.).
- AVM Message:**  
Swarco AVM dispatches **coordinates, vehicle status, service information** based on ITXPT and protocol MQTT.
- VMS playback windows:**  
A windows in playback interface of iVMS client to show related information

## System Architecture

- **Hikvision Mobile NVR+iVMS and Swarco AVM**
  - AVM and Mobile NVR are connected through ethernet switch (on the same LAN network).
  - The communication between AVM and CCTV system based on **ITXPT** standard and protocol **MQTT**.
  - After receiving information from AVM, Mobile NVR sent it with video recording stream to iVMS 5200M platform. **The video monitoring platform can display bus dispatch information.**

## Introduction to Swarco AVM

The Automatic Vehicle Monitoring (AVM) is a system that allows to monitor different information relating to moving vehicles (e.g., position, route, speed, diagnostics). It is a system similar to the telemetry used in motor racing, but is used for the management of vehicles of local public transport fleets.

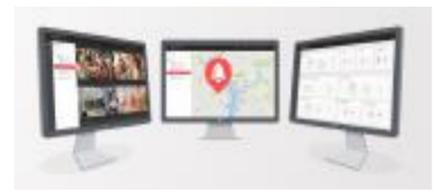

## Product Showcase

- ◆ **DS-MP7608HN series Mobile NVR**
  - 16-ch HD1080P
  - H.265
  - 9~32VDC power input
  - RTSP Stream
  - ITXPT, MQTT

- ◆ **DS-2XM6726FWD-I Mobile Camera**
  - 1920x1080 resolution
  - H.265
  - 120dB WDR, ICR,
  - Up to 30m IR range

- ◆ **iVMS 5200Mobile**
  - Real-time video and playback
  - GIS Map
  - Alarm center
  - Health Monitoring
