

# Alarm Event View Solution for ARC (Alarm Receiving Center)

## Pain Points

Difficult to effectively manage the numerous monitored connections

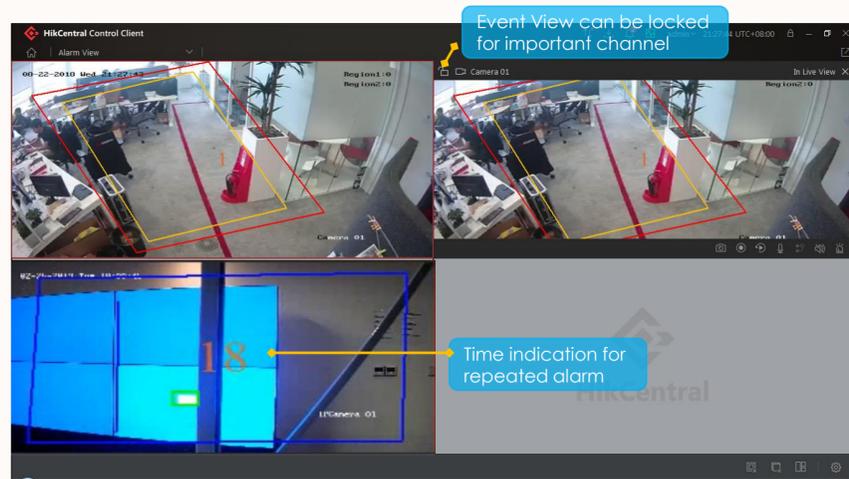

High workload and attention required for ARC operators to focus on every monitored sites

ARC operators may ignore or delay alarm event acknowledgement

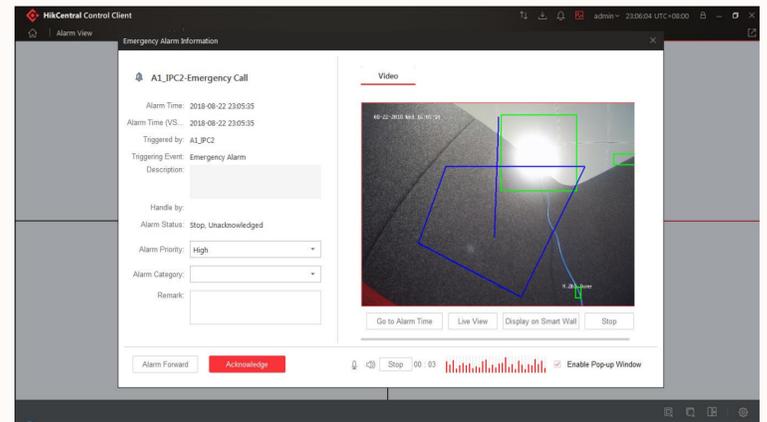

## Solution Highlights

- Event View When Alarm Occurs**
  - When alarm event happens, the linkage channel will automatically show event video on the vacant window division.
  - If the alarm has been acknowledged or time exceeds, the window division will recover to vacant again.
- Double Click to Start Recording**
  - Double click on the current event view window to maximize it and start recording automatically.
- Pop-up Video for Panic Alarm**
  - For the alarm with the highest priority which requires instant attention, a related window pops up automatically when alarm occurs.

- For an alarm event which has been triggered continuously, it dwells on the same window with the repeated alarm times information indication.

## Product Showcase

**HikCentral VSAAS**

- Central management of devices
