

# The SAUTER Group

## 2022

# What we do for you.

For over 100 years, we at SAUTER have been developing and manufacturing innovative products and solutions for building management and room automation throughout the entire life cycle of a building. We make your building energy efficient and thus sustainable. And we do this from the planning to the implementation and the use of the building.

Our four divisions meet your requirements with well thought-out products and comprehensive services. We are distinguished by our short decision-making processes and a direct exchange of information, from Development to the service technician.

## SAUTER Systems

Well-designed workflows offer you planning security and efficient project processing. Numerous challenging and certified projects are a testament to our experience and guarantee you a high level of investment security. Our product range fulfils the requirements for obtaining Green Building certificates.

## SAUTER Services

Our expert service personnel support your systems around the clock to ensure reliable operation, maintain the value of the building and optimise energy consumption. SAUTER Digital Services create transparency and enable remote access and systematic analyses.

## SAUTER Components

Sophisticated products for control, measurement and regulation impress both as individual components and as part of a system. This includes a new generation of IoT devices that store your system data directly in the SAUTER Cloud, where you can access and analyse it flexibly.

## SAUTER Facility Services

Your property is in good hands with us, in every respect. We provide a full range of M&E design, installation and facility management services. We use our extensive knowledge of technical building services to ensure that your installations function effectively and efficiently throughout their entire life cycle.

With our digital services, we create added value from the data collected in your property. Together, we set and follow up on the targets - saving energy and operating costs.

# We are here for you, worldwide!

With over 20 subsidiaries and 300 partners worldwide, we are always close to you. Our financial independence enables us to build and maintain stable business relationships over the long term.

Our two owners, FABREL AG and FS Familienholding AG, stand for tradition, solidarity and innovative strength.
